Summary

Product-oriented software developer with 4+ years experience on iOS development. I make it my goal to create software with the user in mind, creating applications with a useable and intuitive user interface experience. I also understand the importance of creating highly readable and easily maintainable source code. I am constantly striving to learn new technologies and look to ways to better myself in this rapidly changing industry.

I love to read and research about the iOS state-of-the-art and make cool stuff pushing the limits of design.
